

Proprietary BMP - Maintenance Requirements and Inspection

Proprietary BMPs are used to treat the WQ_v through many different processes including filtration, hydrodynamic separation, settling, etc. Proprietary BMP's will be combined with a separate facility to provide flood control.

Regular inspection and maintenance of stormwater facilities is necessary to ensure effective and proper operation. It is the responsibility of the proper owner to maintain all stormwater facilities in accordance with the approved plans and the Stormwater Facility Maintenance Covenant. Proprietary BMP's are ever evolving and new products are continuously being developed. As such, in lieu of providing general inspection and maintenance requirements, the specific manufacturer's inspection and maintenance requirements for the Proprietary BMP shall be adhered to.

Inspections shall be completed at least once per calendar year. Submit a copy of the completed checklist and two photos to the City of Wentzville, Attn: Stormwater Coordinator, 1001 Schroeder Creek Blvd, Wentzville, MO 63385 or by fax 636-327-4892. ***Documentation of the corrective action taken (date, by whom, what was done, etc.) must be provided for each item noted above.***
